## What Is It?

### RETROFIT DOOR HARDWARE PRODUCTS

- Push Plates
- Pull Plates
- Kick Plates
- Push Pad Covers
- and more

## How It Will Benefit Me?

### PEACE OF MIND

- Our products suppress growth of viruses, bacteria, mold and mildew, protecting your employees and customers and making them feel safe.
- The science behind our solution is a unique coating infused with silver ions called Agion, which is applied to all our products.
- Affordable, durable & easy to install.

## Suppress Microbial Growth

### THE SOLUTION

Upgrade your facility or business to become safer, quickly and affordably with our antimicrobial products designed to cover high touch surfaces such as door handles, push pads, lock sets and more.

### THE SCIENCE

The science behind our solution is a unique coating infused with silver ions called Agion. Using a sophisticated roll coating process to apply it to treated steel makes it extremely long lasting.

### THE RESULT

The result is suppressed growth of viruses, bacteria, mold and mildew, protecting your employees and customers and making them feel safe.

Long Lasting

## Corporate Overview

### DESIGN | ENGINEER | MANUFACTURE | DELIVER

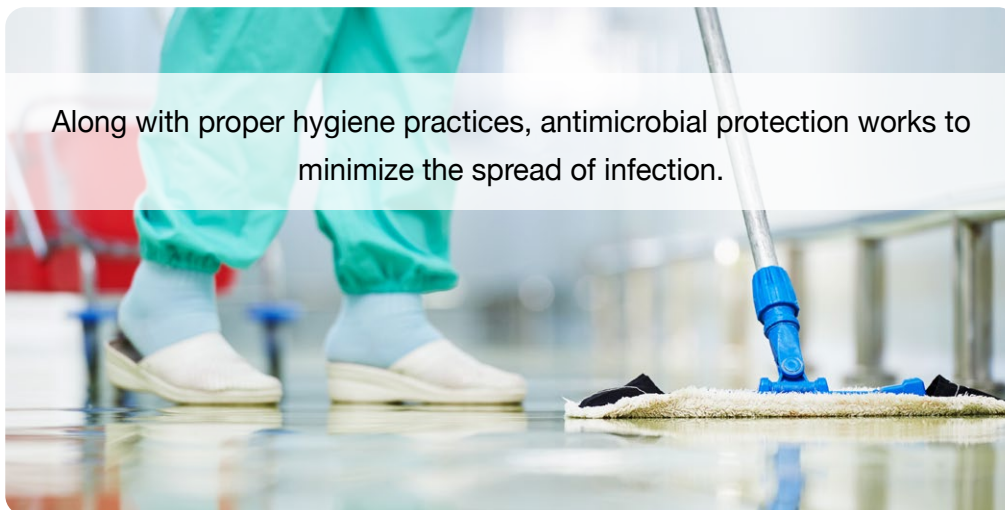

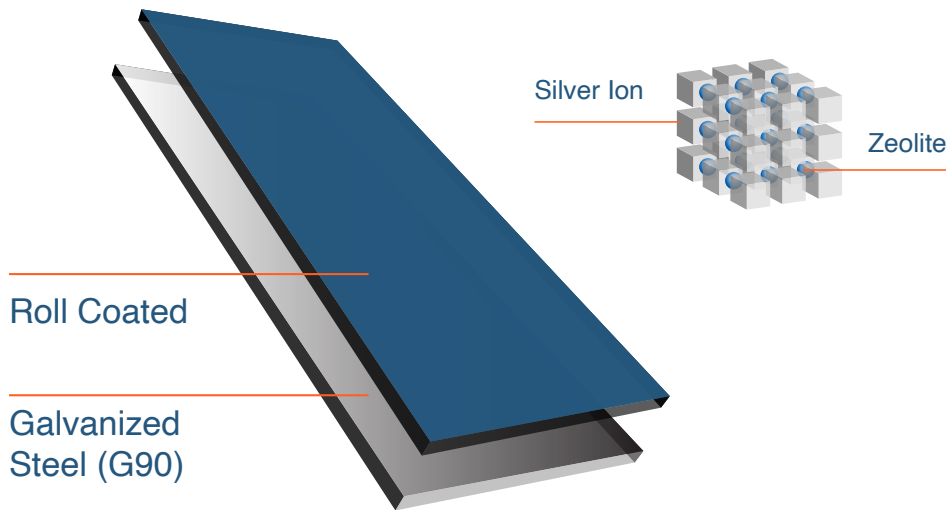

Gallery Specialty Hardware, headquartered in Toronto, Canada, has been making quality hardware products for architects, engineers and contractors for over 30 years. Known for being at the forefront of fabrication methodologies and innovation, Gallery is one of the most trusted names in the industry. Projects include hospitals, hotels, casinos, prisons, sporting venues, retail stores, single and multi-family residential and professional spaces. Gallery Specialty is the exclusive supplier of the GSH Antimicrobial product.

## Agion

### THE ANTIMICROBIAL COMPOUND

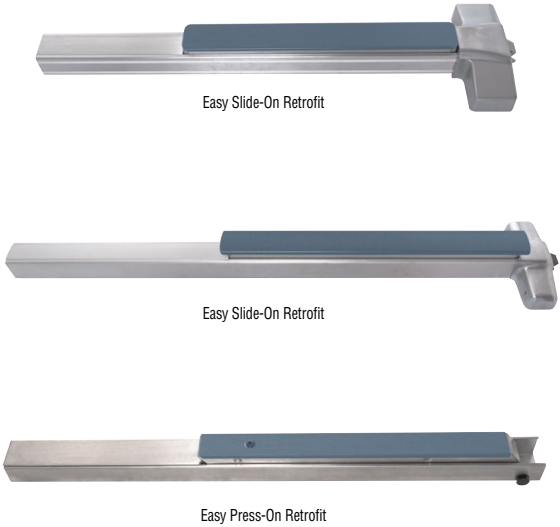

The Agion antimicrobial compound is an inorganic material whose active ingredient is an ionic silver encapsulated in a zeolite matrix for continuous controlled release to the surface of the treated steel. Silver ions suppress the growth of viruses, bacteria and other microbes. A polymer based paint containing the compound is applied uniformly to the steel.

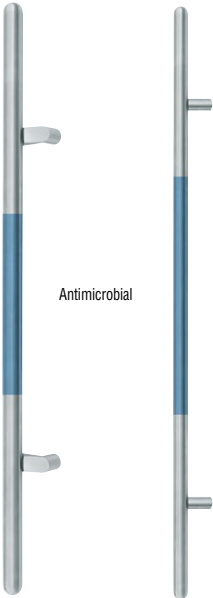

Along with proper hygiene practices, antimicrobial protection works to minimize the spread of infection.

### Make the Shopping Experience Safer For Your Customers

ANTIMICROBIAL SHOPPING CART HANDLE COVER

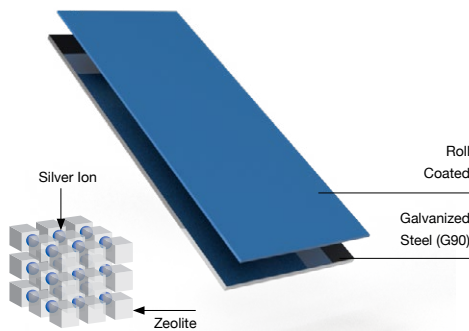

GSH Antimicrobial Protection

INTRODUCING

**GSH Antimicrobial**

- Coated with Agion coating technology
- Retrofits on your existing shopping carts
- Fabricated with high quality materials
- Incredibly easy to install
- Remarkably affordable

Patent Pending

The agion antimicrobial compound is an inorganic material whose active ingredient is an ionic silver encapsulated in a zeolite matrix for continuous controlled release to the surface of the treated steel. Silver ions suppress the growth of destructive bacteria and other microbes. A polymer based paint containing the compound is applied uniformly to the steel.

#### GSH Antimicrobial

The coating process used for the antimicrobial surfaces, known as roll coating, is harder and more effective than powder coating processes.

#### NEW Shopping Cart Handle Cover

Our exclusive shopping cart handle cover is a unique solution for your existing shopping carts (Patent Pending) will suppress growth of bacteria, mold and mildew protecting your employees and customers.

#### Easy to Install

Our shopping cart handle covers snap on in seconds.

#### Peace of Mind for You, Your Staff & Your Customers

Order yours today. There is no minimum order.

## Affordable, Immediate & Easy

### THE BENEFITS ARE ABSOLUTELY WORTH IT

- Easy to implement, and readily available
- Remarkably affordable
- Retrofit existing hardware quickly and easily
- Incredibly easy to install
- Tape or screw applied in minutes
- Built with heavy duty materials
- Made in North America
- A trusted source of custom fabricated door hardware for over 30 years

## FOR IMMEDIATE RELEASE

**PRESS RELEASE**

**FOR IMMEDIATE RELEASE**

June 1, 2020  
David Turk, CEO  
Galley Specialty Hardware Ltd.  
416-667-9593 | info@galleyhardware.com

**ANTIMICROBIAL PRODUCT INSTANTLY READIES BUILDINGS FOR RETURN TO WORK**

The need for safety in buildings has escalated dramatically since the onset of COVID-19. As restaurants, stores, and offices start to reopen across the country, people are reluctant to put themselves in harm's way. Companies are scrambling for innovative ways to protect their customers and their employees.

GSH Antimicrobial is a leading-edge product made specifically to reduce microbial growth on high touch surfaces like door handles, shopping cart handles, push pads and more. This innovative solution uses a unique coating infused with silver ions called Agion. Agion is applied to treated steel using a sophisticated oil coating process, making it extremely long lasting. It's available in a retrofittable format that snaps on or presses on to high touch surfaces in seconds, allowing a building to increase its resistance to viruses, bacteria, mold and mildew. Installation does not require any special training. In addition to the safety benefits, the product is affordable, making it an option for most companies, even those that have been financially impacted by lock downs.

"We are very pleased to be able to offer a product like this during this stressful time in North America," says David Turk, CEO of Galley Specialty Hardware, the company that makes GSH Antimicrobial. "Although it has been a known fact for many years that certain metals suppress microbes, there has been very little attention paid to how silver could be used in applications like this."

According to Sciessent, the company that makes Agion and Agion® Antimicrobial, university and government research previously completed on the antiviral properties of Agion shows:

Chinese Center for Disease Control (2003)

- Complete inactivation of SARS coronavirus in 2 hours
- 100% ES cell substrate, using virus CPE method

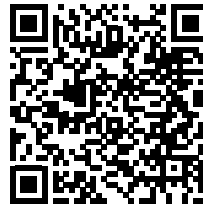

University of Arizona (2004)

- 99% reduction of human coronavirus 229E in 1 hour
- 99% reduction of human coronavirus 229E in 2 hours
- 99.999% reduction of human coronavirus 229E in 24 hours
- TCID50 technique, monitoring MRC-5 cell monolayers for cytopathic effects
